SUMMARY

Applied AI Engineer with 5 years of experience in AI and ML, specializing in Natural Language Processing and Generative AI. Proven track record in developing and deploying AI-powered systems, with a strong focus on AI model deployment and collaboration with cross-functional teams to address business use cases. Experienced in supporting AI Ops initiatives and deploying models on cloud platforms like AWS and Microsoft Azure, with a commitment to continuous learning and knowledge sharing.

SKILLS

Natural Language Processing & Generative AI & Programming
 & AI Model Deployment & AWS & Microsoft Azure
 & Python & SQL & AI Operations

EXPERIENCE

Software Engineer - ML-Driven Security Platform — *SecureAuth Corporation* **Jan 2022 - Apr 2025**

- Led reliability automation for ML-driven risk engines using TypeScript and feature-engineering techniques, integrating location, browser, and time signals; collaborated with cross-functional teams to define compliance-ready ML requirements, improving detection accuracy by 30% and reducing false-positive alerts.
- Implemented CI/CD pipelines using GitHub Actions and Jenkins for AI model deployment; utilized Docker and Kubernetes for reproducible model-backed deployments on AWS and Microsoft Azure.
- Developed Python platform code for monitoring model behavior, configuration lifecycle, and pre-release gates.

Software Engineer - ML Infrastructure & Back-End — *Acceptto Corporation* **Sep 2016 - Jan 2022**

- Developed systems for unsupervised anomaly detection and pattern recognition on a high-concurrency authentication platform using Java, Kubernetes, and probabilistic modeling, which improved detection of abnormal login attempts by 25%.
- Created Java Android SDK modules and REST APIs for behavioral authentication; built Python services to exercise end-to-end ML workflows using deep neural networks.
- Automated release checks in CI for mission-critical ML surfaces.

PROJECTS

Rai | Rai

- Built agentic tool-calling advisor in Python using LangChain, with RAG pipeline integration, RBAC controls, step-up MFA, and bounded writes to ensure secure AI interactions.
- Implemented tenant isolation via smart contract design, integrated audit logging and cost/latency guardrails, and enforced OWASP LLM alignment checks through OpenAPI and CI/CD pipelines.

- Orchestrated three-tier LLM architecture on AWS Bedrock to balance cost, latency, and quality across advisor interactions.

Asar | Asar

- Integrated Rai AI advisor into a React and TypeScript admin UX and mobile (Entros), designing gateway and API boundaries with Trust services for authentication, MFA, audit logging, and risk assessment.

Movie Agent Service

- Tool-calling vs. ReAct POC: service-layer rules/state/validation plus schema-driven tool calls instead of text 'Action:' loops-cleaner API/UI integration, easier auditing, lower hallucination and token cost than leaking reasoning traces to invoke tools.

Fraud Shield AI

- PySpark + PyTorch fraud pipeline.

Churn Intelligence

- XGBoost ensemble, SHAP-linked business narratives (84.77% ROC-AUC).

EDUCATION

AI/ML SWE — Interview Kickstart (2025)

- GPA: 4.0
- Achievements: 800/800 ML & System Design

Executive MBA — Industrial Management Institute (IMI) (Unknown)

- GPA: 3.7

B.A., Economics (Econometrics) — Allameh Tabataba'i (Unknown)

Web Development Certificate — Portland CC (Unknown)

- GPA: 3.9
